

Human CD26-hlgG4

Cat No.: 03-01-0285

Product Name: Human CD26-hlgG4

Description: CD26, also known as Dipeptidyl peptidase-4 (DPP4), is a

serine exopeptidase with a dipeptidyl peptidase activity that

regulates various physiological processes by cleaving

peptides in the circulation, including many chemokines,

mitogenic growth factors, neuropeptides and peptide

hormones. As a cell surface glycoprotein receptor, CD26 id

involved in the costimulatory signal essential for T-cell

receptor (TCR)-mediated T-cell activation.lt acts as a

positive regulator of T-cell coactivation, by binding at least

ADA, CAV1, IGF2R, and PTPRC. Its binding to CAV1 and

CARD11 induces T-cell proliferation and NF-kappa-B

activation in a T-cell receptor/CD3-dependent manner. Its

interaction with ADA also regulates lymphocyte-epithelial

cell adhesion. In association with FAP is involved in the

pericellular proteolysis of the extracellular matrix (ECM), the

migration and invasion of endothelial cells into the ECM.

When overexpressed, enhanced cell proliferation, a process

inhibited by GPC3. CD26/DPPIV plays an important role in

tumor biology, and is useful as a marker for various

cancers, with its levels either on the cell surface or in the

serum increased in some neoplasms and decreased in

others.CD26 also serves as the receptor for Middle East

Respiratory Syndrome Coronavirus(MERS-CoV).

Type: Protein

Property: Recombinant Protein

Source: HEK293

Genbank No.: P27487 (aa.29-766)

Applications: ELISA, WB, Immunogen

Formulation: Each vial contains 50ug purified protein(1mg/ml) in

PBS(pH7.4).

Purity: >95%

Storage: Store at -80°C, Avoid freeze / thaw cycle.

Limitation: For research use only, not for use in diagnostic procedures.
