

Human CD365-hIgG1

Cat No.: 03-01-2370

Product Name: Human CD365-hIgG1

Description: TIM-1 is a member of TIM type I cell-surface glycoproteins, which include an N-terminal immunoglobulin (Ig)-like domain, a mucin domain with distinct length, a single transmembrane domain, and a C-terminal short cytoplasmic tail. TIM-1 is preferentially expressed on Th2 cells and has been identified as a stimulatory molecule for T-cell activation. TIM genes are also involved in host-virus interaction. As receptors for phosphatidylserine, TIM proteins bind many families of viruses [filovirus, flavivirus, New World arenavirus and alphavirus] that include viruses such as dengue and ebola. Interestingly entry of Lassa fever virus, influenza A virus, and SARS coronavirus were not affected by TIM-1 expression. TIM-1 and TIM-4 enhanced viral entry more than TIM-3. TIM-1 serves as a receptor for hepatitis A virus (PubMed:9658108), Ebola virus and marburg virus by binding exposed phosphatidyl-serine at the surface of virion membrane (PubMed:21536871), and Dengue virus by binding exposed phosphatidyl-serine at the surface of virion membrane.

Type: Protein

Property:	Recombinant Protein
Source:	HEK293
Genbank No.:	Q96D42 (aa.21-290)
Applications:	ELISA, WB, Immunogen
Formulation:	Each vial contains 50ug purified protein(1mg/ml) in PBS(pH7.4).
Purity:	>95%
Storage:	Store at -80°C, Avoid freeze / thaw cycle.
Limitation:	For research use only, not for use in diagnostic procedures.
