

## HA1(H3N2)(A/Wyoming/3/2003)

|               |                                                                                                         |
|---------------|---------------------------------------------------------------------------------------------------------|
| Cat No.:      | 01-02-0017                                                                                              |
| Product Name: | HA1(H3N2)(A/Wyoming/3/2003)                                                                             |
| Description:  | HA1(H3N2)(A/Wyoming/3/2003)                                                                             |
| Type:         | Recombinant Protein                                                                                     |
| Property:     | 6xHis tagged hemagglutinin (amino acid 18-347) (H3N2)<br>(A/Wyoming/3/03(H3N2)) (Genebank No. AAT08000) |
| Source:       | HEK293                                                                                                  |
| Genbank No.:  | AAT08000                                                                                                |
| Applications: | WB standard, antibody ELISA, immunogen                                                                  |
| Formulation:  | Each vial contains 100 ug purified protein(1mg/ml) in<br>PBS(pH7.4).                                    |
| Purity:       | >95%                                                                                                    |
| Storage:      | Store at -80°C, Avoid freeze / thaw cycle.                                                              |
| Limitation:   | For research use only, not for use in diagnostic procedures.                                            |
