

## M1(H5N1)(A/Thailand/1(KAN-1)/2004)

|               |                                                                                                                                                                                          |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Cat No.:      | 01-02-0818                                                                                                                                                                               |
| Product Name: | M1(H5N1)(A/Thailand/1(KAN-1)/2004)                                                                                                                                                       |
| Description:  | M1(H5N1)(A/Thailand/1(KAN-1)/2004)                                                                                                                                                       |
| Type:         | Recombinant Protein                                                                                                                                                                      |
| Property:     | C-terminal                      6xHis                      tagged                      M1<br>(A/Thailand/1(KAN-1)/2004(H5N1)) protein (a.a. 1-252)<br>(Genebank Accession No. AAV35110). |
| Source:       | E.coli                                                                                                                                                                                   |
| Genbank No.:  | AAV35110                                                                                                                                                                                 |
| Applications: | WB standard, antibody ELISA, immunogen                                                                                                                                                   |
| Formulation:  | Each vial contains 100 ug purified protein(1mg/ml) in<br>PBS(pH7.4).                                                                                                                     |
| Purity:       | >95%                                                                                                                                                                                     |
| Storage:      | Store at -80°C, Avoid freeze / thaw cycle.                                                                                                                                               |
| Limitation:   | For research use only, not for use in diagnostic procedures.                                                                                                                             |
